SUMMARY

As a fresh graduate in Information Systems with a GPA of 3.66, I am passionate about pursuing a career as a developer, particularly in web development. I possess strong teamwork skills, problem-solving abilities, and good communication skills, which enable me to work efficiently in team environments and deliver creative solutions. Eager to apply my technical knowledge and grow as a professional in the tech industry.

PROJECT EXPERIENCE

- **StayFinder – Final Project at Purwadhika**

I developed StayFinder, a web-based platform designed to help accommodation owners promote their rentals and assist users in finding suitable lodging. As a Fullstack Developer, I addressed the challenge where tenants struggled to market their properties and users found it difficult to search for accommodations. I built core features such as the user transaction flow, tenant transaction management, review system, and reporting & analytics dashboard. Using Next.js, Express.js, PrismaORM, Supabase, and PostgreSQL, I implemented an efficient system that enables tenants to list and manage their properties while allowing users to easily discover and book accommodations. This project successfully streamlined both listing and booking processes, improving usability for both sides.

- **Hafara Guest House – Academic Project**

I developed an online booking system for Hafara GuestHouse, an Islamic guesthouse that needed a more efficient way for guests to make reservations and for staff to manage daily operations. The main challenge was that the guesthouse lacked a centralized and user-friendly platform to display room availability and process bookings. As a Full Stack Developer, I built a simple yet effective web interface that enables users to view available rooms, make reservations, and receive confirmations seamlessly. I also implemented features for room availability management, reservation tracking, and basic reporting to support staff workflows. Using Laravel, PHP, MySQL, and Laragon, I delivered a functional system that improved convenience for guests and streamlined operational tasks for the management.
